

To Whom it may Concern,

I have been an XM radio subscriber for about a year and this is one of the best if not the best variety for entertainment as far as radio is concerned. I have XM radio in both of my vehicles and ever since I got XM radio in them I DO NOT listen to local radio stations at all. I would rather pay for the services that XM satellite radio offers which is not only commercial free music, variety of talk, news and sports but also traffic and weather than to hear commercials all the time, DJ's that talk and not put good music and information that is not there when I need it most. XM satellite radio is the best thing to have come around for car entertainment for those that spend time in their vehicles traveling for people such as myself. I have went on long trips in my vehicle and XM satellite radio provided the enteratinment that I needed while driving. If I pay for these services then I should be able to get them without any restrictions whatsoever. I want the FCC to reject this petition for XM to provide instant traffic and weather when people such as myself rely on it most. If a person pays for this service then he/she should get what they pay for. The people who are lobbying agains XM to provide instant traffic and weather are rpobably threatend by the excellent service that XM provides for it's customers.
